

SHRINK FILMS

With excellent clarity, Polyolefin Shrink Film is a strong, biaxially oriented, heat shrinkable polyolefin film. Shrinkage is balanced and stable during packaging. When compared to PVC film, the Polyolefin Shrink Film is soft, flexible and does not embrittle in low temperature after shrinking. It ensures your product to be better protected and does not give off any harmful gases. The Polyolefin Shrink Film is compatible with most shrink-wrap equipments, including semi-automatic and automatic systems.

Applications of Polyolefin Shrink Films: Toys, games, sports goods, books, gift items, meat, poultry, bakery items, medical products, furniture industry, stationary (computer or preprinted).

Barrier film is available for food products that requires oxygen barrier (like cheese, meat, etc).
